

Correction of the Appendix 2, Presentation Library for Inland ECDIS, of Editions 2.0, 2.1 and 2.3 of the Inland ECDIS Standard

The following entry has to be added in chapter 2, Conditional Symbology Procedures:

“2.7 Underwater Rocks

Since the ENC feature UWTRC has been copied and the attribute WATLEV has been copied the CS (OBSTRN05 or OBSTRN06) of S-52 has to be modified because the CS checks whether the obstruction is an OBSTRN or an UWTRC. It does not contain rules for the symbolization of the copied feature uwtrc, if uwtrc is a point feature. The CS checks also the values of the attribute WATLEV. That means that in the case that WATLEV is not given it has to be checked for the copied attribute watlev instead.”

The copied feature uwtrc and the copied attribute watlev have already been introduced in edition 2.0 of the Inland ECDIS standard in 2006. But without a modification of the Conditional Symbology Procedure OBSTRN05 (of edition 3.3 of the Presentation Library of S-52) respectively OBSTRN06 (of edition 3.4 of the Presentation Library of S-52) underwater rocks, that have been encoded as point features with the new attribute values of water level (new values are: 8, above mean water level, and 9, below mean water level) will not be displayed correctly. The correction has to be applied to the already adopted versions of the Presentation Library.
