## 1. LOOKUP TABLES

The up-to-date Look-up Tables for areas, lines and points are published at <http://ienc.openecdis.org>.

## 2. CONDITIONAL SYMBOLOGY PROCEDURES

### 2.1. Top marks

The CS (TOPMAR01) of S-52 has to be modified because in this CS it is checked on which structure the top mark is fixed. Since the ENC feature BOYLAT was copied, in the CS the feature boylat has to be added to the list of floating structures. If the top mark is located on a boylat the symbols TOPMA1\* have to be drawn according to the top shape and colour.

### 2.2. Daymarks

A new CS DAYMAR01 has to be introduced. This CS is similar to the CS TOPMAR01 (see clause 2.1) with the exception that there is no need for the distinction of floating and fixed structures, because daymarks exist only for beacons, i.e. fixed structures.

### 2.3. Restricted areas

Since the ENC feature RESARE and the attribute RESTRN were copied the CS (RESARE03) of S-52 has to be modified because in this CS the values of the attribute RESTRN are checked. That means that in the case that RESTRN is not given it has to be checked for the copied attribute restrn instead.

### 2.4. Lights

The CS for LIGHTS (LIGHTS05) of S-52 is affected because in this CS there is a check whether a light is located on a floating object or on a fixed object. The list of floating platforms must be extended by the new feature "boylat". To avoid a copy of this CS which would lead to a copy of the official feature LIGHTS, the Inland ECDIS manufacturers have to extend the official CS for LIGHTS as described above.

### 2.5. Bridges

A new CS for bridges has to be introduced to be able to indicate for bridge arches

- a) the maximum vertical clearance depending on the given beam
- b) the available space depending on the given beam and air draft

The condition for this is the encoding of a bridge arch as it is described in the Encoding Guide.

The Inland ECDIS manufacturers have to calculate the vertical clearance of aggregated bridge objects according to the given beam of the ship.

If the vertical clearance of a single bridge object of the aggregation is less than the calculated vertical clearance, this single bridge object must be symbolized by the symbol instruction "AC(CHBRN,3);TX('clr %.1f',1,2,3,'14108',1,1,CHBLK,11)"

If the vertical clearance of a single bridge object of the aggregation is larger or equal than the calculated vertical clearance, this single bridge object must be symbolized by the symbol instruction "AC(CHBRN,2)" without the indication of the non sufficient vertical clearance.

The boundaries of the bridge sequences which are not safe for navigation must be symbolized with the symbol instruction "LS(SOLD,2,DEPSC)".

The boundaries of the bridge sequences which are safe for navigation must be symbolized with the symbol instruction "LS(SOLD,1,CHGRD)".

The boundaries of the single bridge objects inside a bridge sequence, either safe or not safe for navigation, may not be symbolized.

## 2.6. Notice marks

A new CS has to be introduced for notice marks. If there are several notice marks at the same point the fctnm attributes have to be evaluated for the selection of the correct symbol:

- if there is at least one notice mark with fctnm = 1 (prohibition mark), the symbol notmrk04 has to be used;
- if there is no prohibition mark, but at least one notice mark with fctnm = 2 (regulation mark) or fctnm = 3 (restriction mark), the symbol notmrk05 has to be used;
- if there are only notice marks with fctnm = 4 (recommendation mark) and/or notice marks with fctnm = 5 (information mark), the symbol notmrk06 has to be used.

## 3. SYMBOLS FOR INLAND ECDIS

Symbols can be defined in vector format or in raster format. Symbols which will be rotated must be defined in vector format. The size of vector symbols is adapted automatically to the resolution and size of the screen. In case of raster symbols, different symbol sets must be designed to meet the requirements of a readable display.

A list of all Inland ECDIS symbols and their pictures is in chapter 4 and 5. The symbols are supplied in digital form at <http://ienc.openecd.org>.
